

Call: H2020-MG-2016-2017: MOBILITY FOR GROWTH

Topic: MG-5.2-2017: Innovative ICT solutions for future logistics operations

MARLO

R1

- Booking and planning systems that enable the best possible use of the networks and the resources involved

R2

- Capabilities for logistics data sharing taking into account security, privacy and data ownership.

R3

- Capability for dynamic optimisation of use of resources and delivery routes for all types of load units and transportation services

R4

- Visibility and transparency capabilities to support decisions made on the basis of real-time information.

R5

- Business models for logistics in dynamic logistics networks

R6

- Infrastructure enabling low cost integration of all stakeholders (including SMEs), utilisation of smart devices and interoperability between supply chain partners.

Pilot sites

- Willing to take up proposed solutions and test against their daily routine
- Significant cargo being flexible enough at the same time
- Ready and in need to adopt solutions after the project

Solution providers

- Business ideas that are fitting into the general project's objectives and scope
- Proven business model
- Business experience in the field
