**ENTRANCE Project
Purchase aggregation**

- We have developed a survey for vehicle OEMs, membership organisations and research institutions
- The main aim of the questionnaire is to determine the viable options for zero emission & sustainable commercial vehicles
- Feedback from the survey will enable us to develop a clear roadmap, which identifies the feasible options for zero emission & sustainable commercial vehicles for ALICE members
- We hope that the feedback will help us to identify the main types of zero emission & sustainable commercial vehicles and a timeline for their availability

- Share the survey with those of you interested – appreciate feedback before finalising
- Identify vehicle OEMs, membership organisations and research institutions
- Identify decision maker for contact information in OEMs, membership organisations and research institutions

- Plan:

Slido question – who should take part in this survey/activity (e.g. what OEMs, organisations, etc.)?

These are some of the organizations we are in contact with:

who should take part or liaise with in this survey/activity (e.g. what OEMs, organisations, etc.)?

CALSTART
International Council on Clean Transportation
ACEA MAN TEVVA
EV100+ VDL Volvo Scania EUCAR
Transport Decarbonization Alliance
Sustainable Freight Buyers Alliance
EINRIDE Avia Motors

ALICE (TG1) Efficient and Low Emissions Assets and Energy Meeting

Low Emission Assets Availability

Graham Major-Ex

Webinar on HVO & Biodiesel

- Opportunity to hear about implementation of advanced biofuels – practical examples
- Neste – world's leading producer of HVO
- IKEA – providing practical examples of their experiences with biofuels
- An Post – sharing insights on the operations side of biofuels, such as fuel consumption vs. diesel etc.
- Potentially 1-2 additional perspectives to be added

Date: May 2022

Offers a platform with online and off-line services to accelerate innovation and upscaling of innovative mobility solutions

- **Supply**: First-of-a-kind and near to market Zero Emissions trucks up to 40tn and long haul transportation → Survey!
- **Demand**: Potential buyers of these vehicles
- **Finance**: Private investors and public funding instruments

Why?

- We need to accelerate adoption of zero emissions vehicles → Learning curve
- Very fragmented offer and demand at this stage as mass production is only envisioned in the medium term
- Solutions are not available, difficult access for testing (particularly medium/small carriers). *I want 1 truck!*
- Supply still need to be create and scaled up. *I do not want to process single unit orders, I need scale to hook investments! Some customers only want to take a picture with our ZE trucks or talk, not serious about it*

Get engaged!

- Are you developing/manufacturing these vehicles?
→ Contact us and fill in the Survey!
- Are you a carrier or a shipper willing to support your carriers facing this challenge?
→ Contact Fernando Liesa at fliesa@etp-alice.eu to know more/next steps!
- Are you an investor or able to raise funding for this purpose?
→ contact Fernando too!
