

Our Vision

We open the call to look for concrete examples in which R&I projects' results have been further developed and have been deployed as commercial solutions, have generated a new market or have contributed to new policies or regulations. The seventh call focuses on 'Efficient and Zero-Emission Logistics'.

We want to promote implementation cases in order to inspire others to follow successful examples. We also want to understand enabling factors to lead such success.

We are studying 8 projects from FP7 and HORIZON 2020 to analyse their impacts. If you have used outcomes of those projects or any other regional, national or European R&I project beyond our lists, please let us know. If you know any projects that have led successful implementation cases, please reach out as well.

We will form a selection committee to look into all collected cases and present the seventh ALICE Logistics Innovation Award to recognise the achievement in a dedicated event.

Call for Submission: Implementation Cases on Efficient and Zero-Emission Logistics

7th ALICE Logistics Innovation Award

Get Involved:

Submission open: 7 August 2023

Submission deadline: 8 September 2023

Emissions Reporting		

Efficient and zero-emission logistics

With 'Efficient and zero-emission logistics' we are targeting projects that improve the fuel efficiency, loading factor and overall transport capacity of road logistics, using adaptations that impact the logistic process, not only the truck itself, and can be combined with a full zero-emission, electrified drive-line.

In addition, we are also looking into projects that develop a methodology to report and account transport emissions.

Implementation Cases

Implementation Cases are concrete examples in which causal links between public R&I funding and technology, organizational or process innovation in a specific logistics area can be established.

Implement Cases are research results have been further developed and have been deployed as commercial solutions, have generated a new market or have contributed to new policies and will stablish causal links between research funding and impact.
